Mt. Odin, overlooking Greenerburgh, the capital of Westmoreland County, and commanding an extensive view of Southwestern Pennsylvania, is one of the many western foot-hills of the Alleghany Mountains—a stepping-stone from the barren heights of Appalachia into the fertile depths of the valley of the Mississippi.

The Park includes a ten-acre patch of the forest *prima-val*, and contains a noteworthy number and variety of native trees of grand proportions, Chestnut, Walnut, White, Red, and Black Oak, Shellbark and Pignut Hickories, A-b. Gum, Locust, Sugar Maple, Beech, and the imperial magnoliads, the White, or Hickory, Tulip-tree, and the Yellow, with typical specimens of the smaller forest-growths, Sassafras, Honey Locust, Dogwood, Wild Cherry, Laurel-leaved Oak, Butternut, and their congeners.

The Orchards are Old and New: the former containing a variety of fruit-trees set out betimes during the past twenty years by the present proprietor, and the broken ranks of two apple-orchards planted by his predecessors, the first perhaps three quarters of a century ago, and the second, some five and twenty years. The New are especially the Experimental Orchards, and—*con amore*—are designed for the testing of all kinds of fruits for the region of Southwestern Pennsylvania, and the propagation of the best.

Altogether, **Mt. Odin Park and Experimental Orchards** embrace sixty-four acres; and range in elevation above the circle of the sea from 1125 to 1315 feet; in exposure, from point to point the circuit of the compass; and in soil, from the toughest of limestone clay to nearly pure sand.

Accordingly, **New Fruits** of probable utility in the region of Southwestern Pennsylvania are wanted and solicited from all middle-temperate parts of the world, and will receive such attention, horticultural and reportorial, as the contents of this eckeklist evince the proprietor is capable of bestowing in a favorite pursuit.
